SPACE Adds More Cadets to its Crew

FOR IMMEDIATE RELEASE:

St. Louis, MO -- October 1, 2012 -- Scientists say the universe is constantly growing, and that's certainly true at SPACE Architecture + Design. At a time when most design firms are scaling back, SPACE is excited to announce that six talented architectural designers and one PR professional joined the team: Greg Trost, Karey Brown, Mackenzie McCulloch, Jeremy Clagett, Lori Everett, Parker Brock, and Shelley Satke Niemeier.

A veteran of the local design scene, registered architect Greg Trost has played an integral part in some of SPACE's most high-profile design projects, including Gerard Craft's new Pastaria. A proud Jayhawk, Greg has a broad range of invaluable skills, including expertise in feasibility studies, master planning, project design, LEED (Leadership in Energy and Environmental Design), and state and federal historic tax credits.

Karey Brown took a break from globetrotting across the world as a cruise ship director to earn his Master of Architecture degree from Washington University, and SPACE is now fortunate to have him and his diverse experiences part of the team. His work has been built across the United States and Canada, but he stays grounded in St. Louis by lending a hand at a variety of charities, including Food Outreach, where he is on the board of directors.

A winner of loads of awards including the prestigious AIA Henry Adams Medal, Mackenzie McCulloch started at SPACE on a part-time basis back in February, commuting each week from southern Missouri. Before long, he was hired as a full-time architectural intern in the healthcare team. Mackenzie is an associate member of the American Institute of Architects, St. Louis, and he is a member of their new Mentorship committee.

Although not a St. Louis native, Jeremy Clagett has immersed himself in the local urbanist culture to improve the city through his participation in City to River, NextSTL, and as cofounder of What Should Be. When not designing, he lends a hand tweeting and he keep the studio up on local community and urbanism events. Before joining SPACE's healthcare team, Jeremy was an architectural intern at Killeen Studios in St. Louis.

An award-winning registered architect and LEED-Accredited Professional, Lori Everett came to St. Louis from Helix Architecture in Kansas City, where she was the project architect on a variety of LEED buildings, including a number of historic renovations. She's using her impressive skills on a variety of projects at SPACE, including residential and hospitality design. In addition to her work at SPACE, Lori and her husband have a product design firm called EVRT Studio.

Continued...

Parker Brock is an intern architect who knows how to design and build, so he has plenty to keep him busy at SPACE. After earning his Masters in Architecture from University of Illinois, he recently moved to St. Louis to run the SPACE fabrication shop. He will split his time between the shop and design studio. Parker has lent his skills to Habitat for Humanity and other non-profits that build homes for the physically disabled.

Shelley Satke Niemeier spends her time spreading the word about SPACE's projects, talented designers, and their role in community events. She has an MA in American Studies with an emphasis in Visual Culture Theory and Urban Studies (architecture sans math) from Saint Louis University. When not writing, blogging and tweeting for SPACE and the Campbell House Museum, she advocates for thoughtful historic preservation and creative reuse in St Louis.

About SPACE...

An AIA award-winning design-build firm in St. Louis, Missouri, SPACE was launched in 2005 by St. Louis native Tom Niemeier. SPACE's collaborative team of talented architects and interior designers give clients inspiring homes, schools, medical facilities, restaurants and churches to enhance the most important moments of life. As proud residents of St. Louis' up-and-coming Grove neighborhood, SPACE encourages its employees to give back to the area through pro bono work with their participation in Public Architecture's 1% Program, in which they donate 1% of their hours back to local nonprofits each year. SPACE's community participation was recognized by St. Louis Mayor Francis Slay, who awarded them the Spirit of St. Louis Award in 2010. For more information, visit www.spacestl.com, get up to the minute news on their blog at spacestl.wordpress.com, or follow along on Twitter at @spacearchitects.
